

MIST HOOD

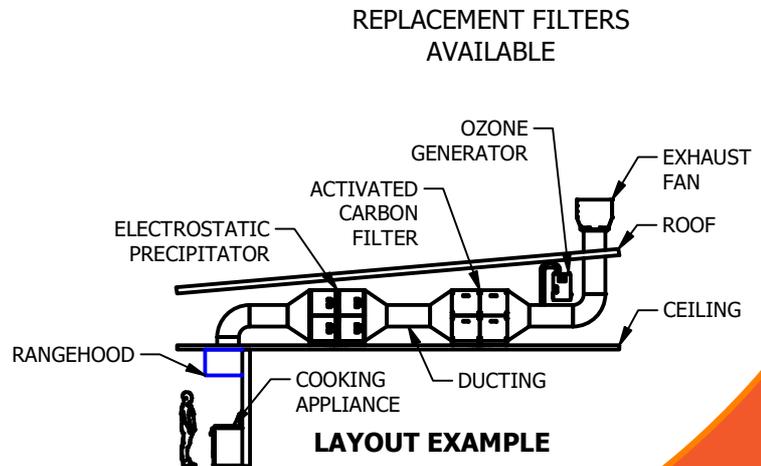

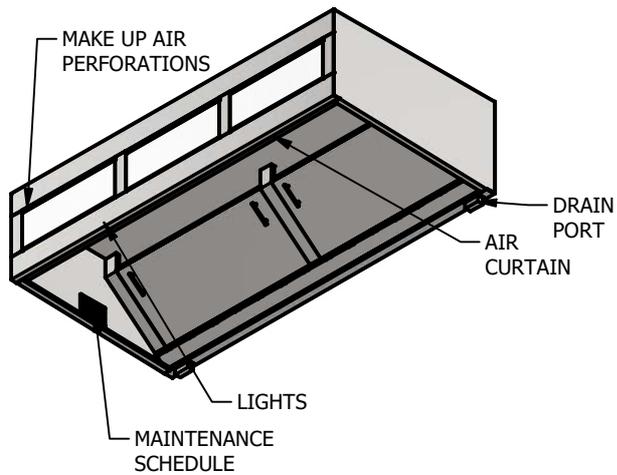

Cavalier Ventilation have developed a system to treat all oven exhausts with a water misting spray and stainless steel baffle filter operation. Included in the system is a "cool air make-up intake" which further dilutes the exhaust to a much lower temperature.

The Cavalier Mist Hoods have misting nozzles that treat the exhaust air & douse all live embers before the contaminants pass through the filters. This creates a fire resistant system that protects the rest of the exhaust components.

An air curtain at the front of the hood prevents contaminated air from escaping into the workspace.

Cavalier's Mist Hoods are measured to be site specific and achieve the best outcome for your site requirements.

Site specific drawings can be arranged. Please email your kitchen layout to info@cavaliervent.com.au to arrange a drawing.
